Flying Factories expand across the UK

Expansion of Beattie Passive Flying Factories enables partners to deliver their own affordable Passivhaus homes with offsite manufacture and their own labour force.

Beattie Passive's Flying Factory is gaining significant traction across the UK. So far, five organisations, located across England, Scotland and Wales, have engaged with Beattie Passive in setting up their own factories to deliver homes using the Beattie Passive system – and there are more to follow in 2019.

Beattie Passive's Flying Factories are gamechangers in modular/volumetric construction as they enable housing associations and developers to set up their own modular factories, at a relatively low cost, to deliver their own Passivhaus standard housing.

This offering stands out from other systems that require considerable investment in order to set up and maintain large, expensive factory facilities.

The innovative offering, by

Norfolk-based company Beattie Passive, provides all the know-how, experience and support to help organisations to set up and run a Flying Factory, providing them with the confidence and ability to manufacture Passivhaus on a large scale with their own local labour and ability to control their own costs.

The award-winning build system delivers homes that are built to the high standards of Passivhaus providing healthier, comfortable, low maintenance properties with reduced heating costs of up to 90pc.

Cartrefi Conwy is the first organisation to set-up a Beattie Passive factory in Wales, and CEO Andrew Bowden said: "Beattie Passive not only delivers high quality Passivhaus homes, they also actively engage with the local community to bring vital skills and

education in construction.

"These values run parallel to our own and, having outlined our housing objectives, it was clear that a factory would be hugely effective

in helping us to achieve them. We look forward to a long and productive relationship with Beattie Passive."

With further expansion into 2019,

Beattie Passive's partners are able to build their own homes, employ local labour and control costs whilst delivering the high performing homes of Passivhaus.

Working in Partnership to deliver Passivhaus

Delivering your own modular homes with a Beattie Passive Flying Factory

- ✓ High performance Passivhaus homes
- ✓ Factory on or close to construction site
- ✓ Faster delivery
- ✓ Local workforce or DLO
- ✓ Existing supply chain
- ✓ Control of costs at every stage of the build
